Waterequip Grey uPVC Pipes, Valves & Fittings

Un-plasticized Polyvinyl Chloride (uPVC) pipes and fittings exhibit excellent resistance to aggressive environments both naturally occurring and as a result of industrial activity. Grey uPVC is resistant to almost all types of corrosion, either chemical or electrochemical and has a number of other benefits including low flow head loss, light weight, easy installation, high strength, longevity, maintenance, chemical resistance and UV tolerance.

uPVC Pipes and fittings are often used in the following applications:

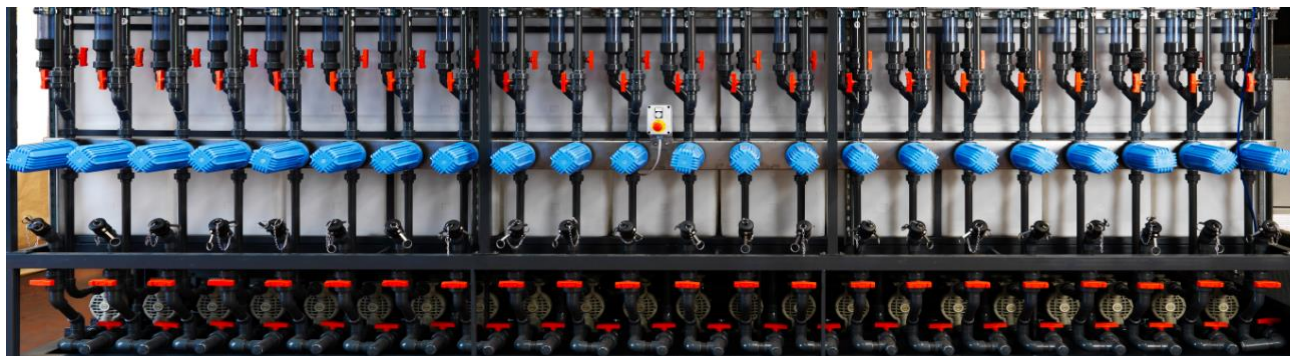

- *Acid/alkaline chemicals piping systems
- *Salt water piping systems
- *Drinking water pipe distribution systems, both main and supply lines
- *Irrigation water transportation systems
- *Chemical waste pipe distribution systems
- *Sewer and discharge pipe systems

Grey uPVC pipe supplied by Waterequip meets ASTM D1785 for both Sch40 and Sch80. Grey uPVC Sch80 socket fittings meet ASTM D2467 and grey uPVC threaded fittings meet ASTM D2464. Grey uPVC PN10/16 fittings meet BS4346/1.

The working temperature range for Grey uPVC pipe systems is from 0°C to 60°C. Pressure ratings of pipe and fittings are generally nominated at a temperature of approximately 20°C to 23°C (73°F). They can be used at temperatures as high as 60°C, but it is important to know that as the temperature does increase, then the pressure must be reduced.

Grey uPVC Valves

Principle Characteristics of Waterequip's "Effast Economy Ball Valve"

- * Ergonomic handle in shockproof ABS
- * Valve Body in uPVC
- * Double O'Rings in the stem command
- * Ball seats are supplied in PTFE
- * Pressure at nominal resistance - 16 bar at 20°C up to 2"
- 10 bar at 20°C for 3" & 4"
- * In closed position it is possible to dismantle the pipe downstream
- * Lined up passage which means the hole of the sphere corresponds to the inside diameter of the pipe

Principle Characteristics of Waterequip's "Effast Industrial Ball Valve"

- * Ergonomic handle in shockproof ABS
- * Valve Body in uPVC
- * Double O'Rings in the stem command
- * Complete interchangeability with other Effast valves including "Economy" Valve
- * Ball seats are supplied in PTFE
- * Gaskets are supplied in EPDM or FPM
- * Seats regulation and regulation of ball carrier are supplied in PTFE
- * In closed position it is possible to dismantle the pipe downstream
- * Easy to maintain with fast substitution of the O'Ring and of the gaskets of the sphere
- * Lined up passage which means the hole of the sphere corresponds to the inside diameter of the pipe
- * Blocking ball in position open/close with tap
- * "Industrial" can be actuated

Thread Sealant Paste

Christy's Ultra Seal™ is an all-purpose thread sealing compound, containing Teflon® for easier assembly/disassembly. Ultra Seal™ is a white, brushable, grit-free, smooth paste. Ultra Seal™ provides a leak-free seal on most types of metal and plastic threaded applications. It's non-toxic, non-seizing, and non-hardening. Ultra Seal™ does not transfer any taste or odor, is non-corrosive and contains an anti-galling compound that allows for easy disassembly after years of service.

Kembla Stainless tube is 316L grade (EN 1.4404) complying with DIN EN 10088, fabricated according to DIN EN 10312 and DVGW-W 541 and is supplied as straight 6m lengths with outside diameters in the range 15mm - 108mm. It is compliant with AS 5200.053 and has Watermark Approval #23151. Kembla Stainless tubes combine low carbon, at less than 0.03%, with a minimum molybdenum content of 2.3% for improved corrosion resistance. Low carbon, austenitic stainless steel is roll formed and then longitudinally plasma-inert gas-welded to precisely form the tubes. Kembla Stainless tubes are bright annealed and solution heat-treated, resulting in attractive, hygienic and highly durable product.

KemPress Stainless fittings are manufactured and quality controlled to AS3688, with 316L (material EN1.4404) for parts made from tube, 316Ti (material EN1.4571) for threaded fittings and 316 (material EN1.4408) for precision cast fittings, all having Watermark approval #23087 for Standard (EPDM) and Industry (FKM) fittings.

All KemPress fittings are optimally designed to ensure the most effective joint formation, achieving or exceeding the hydraulic and structural requirements of standards and are fully supported by the MM Kembla warranty of up to 25 years. KemPress Stainless fittings up to and including 54mm have a leading lip, whereas, the 76.1mm and 108mm press fittings do not. KemPress Stainless press-fit fittings are available with three different O-rings depending on the application. Each type of O-ring is made of a different material, black coloured EPDM for Standard fittings, red coloured FKM for Industry fittings and yellow coloured HNBR for Gas fittings.

Standard press fittings utilise a black EPDM (Ehtylene Propylene Diene Monomer O-ring). EPDM possesses excellent resistance to ozone, sunlight and weathering, ahs very good flexibility at low temperature and good chemical resistance. This O-ring is suitable for hot and cold potable water applications and some industrial applications.

Industry press fittings utilise a FKM (Fluorocarbon) O-Ring. FKM has excellent resistance for high temperatures up to 200°C, ozone, weather, oxygen, mineral oil, fuels, hydraulic fluids, aromatics and many organic solvents and chemicals. It is ideal for petroleum products, fuels including those blended with ethanol or methanol, diesel, biodiesel, mineral oils and greases, silicone oils and greases, high vacuum, strong acids, ozone, weather and very high temperatures.

Gas press fittings utilise a HNBR (Hydrogenated Nitrile Butadiene Rubber) O-ring sealing element. HNBR possesses superior mechanical properties and improved resistance to heat, ozone and chemicals. HNBR has been used for decades in automotive and industrial applications. It is well suited to propane, butane and natural gas (methane). It is not suitable for drinking water.

Waterequip is proud to be a distributor of the MM Kembla, KemPress copper press-fit connection system. MM Kembla has combined the experience and knowledge of nearly 100 years of Australian copper tube manufacturing with German engineering to produce a press-fit connection system that offers all the benefits of copper with faster and easier installation. With a warranty of 25 years and a design life of over 50 years, KemPress offers you the peace of mind and the simplicity that you want. The KemPress tools are of the highest quality, are the lightest on the market and have the longest service life.

An extensive range of KemPress fittings are available for both Water and Gas Applications. Inside each fitting is a sealing element called an Elastomeric O-ring. A black O-ring indicates the fitting is for Water applications, and a yellow O-ring indicates the fitting is for Gas applications. They are not interchangeable for their different applications. It is essential that the O-rings are not contaminated or damaged by foreign material such as copper swarf or sharp metal. KemPress fittings have been designed to provide a tight fit when pushed together to allow the rough in to be completed prior to processing. This ensures you have the right design and tube placement and allows you to make adjustments, if required, prior to pressing.

The KemPress fittings are designed to deliver minimal deformation to the internal shape of the tube they are connecting to, reducing turbulence in the flow of the liquid. The connection provides a rigid coupling with excellent resistance to torsional forces. The objective of the press process is to deliver a permanent connection while achieving the required pull out strength according to AS3688. The KemPress process presses the lip of the fitting and then compresses the O-ring at the same time.
